Venipuncture for the Application of Blood Concentrates – Book

The benefits of PRF and other blood concentrates are well known in the dental profession, but venipuncture is not a skill dentists naturally possess. In this, as in every form of treatment, providing high-quality care is essential.

Patient safety must be ensured, and the procedures used should be maximally efficient and effective. Shahram Ghanaati developed this tidy little textbook to empower dental professionals to perform blood collection and the preparation of blood concentrates safely, efficiently, and with the best possible results in the dental office.

The book walks readers through the process step by step, with detailed illustrations demonstrating clinician positioning to instill confidence.

The content is practical and easy to follow, making this a perfect tool for clinicians interested in incorporating blood concentrates into their practice.

SUTURES

Monoglyc PGA-PCL Suture is a highly pliable monofilament suture, that also absorbs predictably.

With the smooth monofilament surface structures, it handles and ties easily, and is virtually inert in tissue.

Basically, PGA-PCL sutures behave like PTFE sutures, but do not need to be removed!

~~WAS \$252.00~~

NOW \$201.60

GLYCOLON® is a monofilament suture material, whose degradation rate in comparison with PGA is clearly reduced by the specially selected ratio of polyglycolic acid to caprolactone.

~~WAS \$440.00~~

PROPHYLAXIS POWDER

RHAPSODY

Rhapsody Flow is a sodium bicarbonate based powder specifically designed for professional oral hygiene. Our product has a mild and selective action, making it an ideal choice for professional tooth cleaning. Unlike most air-abrasive dental powders on the market, Rhapsody Flow gently scrubs tooth enamel and gently removes over-gingival plaque. It also has a polishing effect due to its reduced particle size. Available in 8 flavours: Barberry, Lemon, Mint, Strawberry, Tropical, Blackcurrant, Cherry and Neutral. Take care of the health of your smile with Rhapsody Flow!

Cavity pHighter Test Strips:

Measure the oral pH balance to determine cavity risk.

Mouth bacteria can lead to increased acidity, resulting in dental erosion and painful cavities. Cavity pHighter strips measure the pH and buffer capacity in your saliva. Simply wet the pH strip with the patient's saliva, wait 10 seconds, and measure their color reading against the key on the bottle.

The easy-to-use color key will indicate their mouth pH level and associated risk.

~~WAS \$40.81~~

NOW \$30.61

Mints:

Created for at-home and professional dental use, Cavity pHighter Mints protect your patients' teeth after they've left your office.

CAO's cavity-fighting mints protect your mouth against acid-producing bacteria by reducing acidity and balancing oral pH levels.

The result? Decreased risk of cavities and minty-fresh-smelling breath!
